EDUCATION

B.S. Computer Science, State University | Expected May 2025 | GPA: 3.7 Relevant Coursework: Data Structures, Algorithms, Distributed Systems, Machine Learning, Databases, Compilers

EXPERIENCE

Software Engineering Intern, CloudScale Technologies | Summer 2024 - Architected and shipped a caching layer (Redis) for the recommendation engine, reducing API latency by 65% (8s → 3s) and saving ~\$50K annually in compute costs - Designed and implemented rate-limiting service in Go; handles 10M+ requests/day across 4 data centers - Mentored 2 junior interns on system design patterns; led weekly code review sessions - Improved test coverage from 62% to 89% by writing 200+ unit and integration tests; reduced production bugs by 40%

Open Source Contributor, Apache Kafka | Jan 2024 – Present - Merged 3 pull requests improving partition assignment logic; gained expertise in distributed consensus - Reviewed community contributions and provided performance feedback to external contributors - Impact: changes used by 1000+ organizations running Kafka in production

Teaching Assistant, Data Structures (CS 201) | Jan 2024 – May 2024 - Held office hours for 40 students; designed practice problems and mock exams - Graded assignments and exams (500+ submissions); provided detailed feedback improving class median from 76% to 83%

Software Engineering Intern, FinServe Corp | Summer 2023 - Developed real-time transaction monitoring system in Python/C++ detecting fraudulent activity with 96% precision - Optimized database queries reducing nightly reconciliation runtime from 45min to 8min via indexing and query rewrites

SKILLS

Languages: Python, Java, Go, C++, JavaScript, SQL Frameworks/Tools: Spring Boot, Node.js, React, TensorFlow, Kafka, PostgreSQL, MongoDB Infrastructure: Docker, Kubernetes, AWS (EC2, S3, Lambda), Git, CI/CD Other: System design, distributed systems, machine learning, REST/gRPC APIs, Agile

PROJECTS & IMPACT

Real-Time Chat Analytics Platform | Python, FastAPI, PostgreSQL, Redis, React - Built full-stack analytics dashboard tracking 100K+ concurrent users; designed horizontal scaling strategy - Implemented WebSocket-based real-time updates reducing message latency to <100ms - Open-sourced on GitHub; 500+ GitHub stars, used by 12 companies for product telemetry

Compiler Optimization for Neural Networks | C++, Python, LLVM - Undergraduate research project: developed automated optimization passes reducing ML model inference time by 35% - Co-authored paper submitted to ASPLOS 2025 (under review) - Presented at student research symposium; awarded “Outstanding Research” prize

RECOGNITION & LEADERSHIP

- Dean’s List: 3 consecutive semesters
- ACM ICPC Regionals: Placed 7th with team (Spring 2024)
- Organizer, Women in Tech Mentorship Program: grew program from 15 to 120+ members over 2 years
- HackerRank Global: Top 1% (ranked 4,200th globally out of 600K+)
